

WASHING MACHINE ALERT SYSTEM

Group No. : EE 3.1.14

INTRODUCTION

- Design an alerting system for washing machines which are using by group of people
- Forget to get the washed clothes OUT !
- A system for alerting the user when the process is finished or any other states could be occurred

OPTIONS & FEATURES

- Main feature of our system is to inform user, when the washing process is over. (With SMS)
- Register users with their details
- Identify all possible error codes & inform to users as well
- Develop a web to inform that machines are occupied or not users

FUNCTIONALITY

- Simulation in Proteus

PROTEUS

Problems faced

- Lack of resources because there is no similar products
- Can not simulate SIM 800L GSM module in proteus
- Assembly programing is not much familiar to us
- Need to access the wiring diagrams of washing machines & it is limit by manufacturers

THANK YOU !
